## TBUMC 2/3 1.

Задание з исправленное.

(3) 
$$p(x) = \frac{c}{e^x + e^{-x}}, c^{-\frac{9}{2}}, P(-\pi, \pi)^{-\frac{9}{2}}$$

$$= \int_{-\infty}^{+\infty} \frac{c}{e^{x} + e^{-x}} dx = 1$$

$$= \sum_{x=0}^{\infty} \frac{1}{1+e^{x}} dx = \begin{vmatrix} e^{x} = t \\ e^{x} dx = dt \end{vmatrix} = \int_{1+e^{x}+1^{2}}^{1+e^{x}} dt = \int_{1+e^{x}+1^{2}}^{1+e^{x}} dt$$

$$= \frac{1}{1} \operatorname{arctg}(\frac{t}{1}) + C = \operatorname{arctg} t + C$$

$$= 5 \int \frac{1}{e^{x} + e^{-x}} dx = avctge^{x} \Big|_{-\infty}^{\infty} = \frac{\pi}{2} - 0 \approx 1.57$$

=> 
$$C \cdot 1,57 = 1$$
  
 $C = \frac{1}{1,57} \approx 0,6369 \left( = \frac{2}{N} \right)$ 

2) 
$$P(-\bar{n} = x = \bar{n}) = \int_{0}^{+\bar{n}} \frac{2}{\bar{n}} = \frac{2}{\bar{n}} \cdot \text{dretge}^* \Big|_{-\bar{n}}^{\bar{n}} = \frac{2}{\bar{n}} \cdot$$
